CineTrack_Movie & Review Analytics

Section 1: Easy (Basics & Filtering)

1. Select all columns from the movies table.
2. Select only the title column from the movies table.
3. Show the title and rating for every movie.
4. List the top 5 movies with the highest budget used.
5. List the first 10 movies released, sorted by year (oldest first).
6. Find all movies belonging to the 'Action' genre.
7. Find all movies released in the year 2024.
8. Find all movies that have a perfect 10.0 rating.
9. List all movies with a budget of less than 1,000,000.
10. Find all movies that are NOT in the 'Horror' genre.
11. List all actors who are from the 'United States'.
12. Show the 5 youngest actors based on their birth year.
13. Find all actors born before the year 1990.

14. Show a list of all unique nationalities present in the actors table.
15. Find 'Sci-Fi' movies released after the year 2020.
16. Find all movies that are either 'Drama' or 'Comedy'.
17. List movies with a rating above 8.5 and a budget below 5,000,000.
18. Show the top 3 highest-rated 'Horror' movies.
19. Find actors who are neither from 'India' nor the 'USA'.
20. List all movies that were added to the database today.
21. Show the 5 most recently updated actor records.
22. Find movies where the budget is either NULL or 0.
23. Find all movies where the title is exactly 10 characters long.
24. Count how many 'Documentary' movies are in the database.
25. List all movies released between 2010 and 2020.

Section 2: Intermediate (Aggregates & Strings)

1. Find every movie that has the word 'Action' or 'Star' anywhere in its title.
2. List all movies where the title starts with the word 'The'.
3. Find movies with titles that end with the letter 's'.
4. Show the first and last names of all actors joined together as 'full_name'.
5. Create a 15-character preview of movie titles followed by '...'.
6. Calculate the average rating of all movies in the database.
7. Calculate the total budget spent on all movies combined.
8. Show the highest and lowest movie ratings recorded.
9. Find the total number of movies available in each genre.
10. Calculate the average budget specifically for 'Sci-Fi' movies.
11. List all actors whose first name is exactly 6 characters long.
12. Display all movie titles in complete uppercase.
13. Find all movies released between 2015 and 2025 (using BETWEEN).
14. Show all movies with a rating between 6.5 and 8.5.

15. List the last names of all actors and the length of each name.
16. Find 'Action' or 'Comedy' movies that also have a rating higher than 7.0.
17. Show the average rating for every genre.
18. Find the total budget per genre, but only for those exceeding 100,000,000.
19. Identify the top 3 years with the highest number of movie releases.
20. Display the genre 'Sci-Fi' as 'Science Fiction' in the results.
21. Find actors whose last name contains the string 'man'.
22. Display all movie titles with their ratings rounded to the nearest whole number.
23. Calculate how many points each movie is away from a perfect 10 rating.
24. Extract the name of the month from the 'created_at' column for all movies.
25. Find the highest budget amount recorded for each genre.

Section 3: Advanced (Relational Logic & Joins)

1. List movie titles along with the first and last names of their cast members.
2. Find the names of all actors who have played a 'Lead' role.
3. Show movie titles and the total count of actors cast in each one.
4. Find the names of all actors who appeared in 'Action' movies.
5. List all movies featuring an actor with the last name 'Smith'.
6. Find the total budget of all movies that Actor ID 10 has appeared in.
7. Show the titles of movies that have more than 5 actors in their cast.
8. Find actors who have worked in both 'Sci-Fi' and 'Drama' genres.
9. List the movies and roles for a specific actor using their full name.
10. Find the average rating of films where 'Supporting' actors appeared.
11. Find the names of actors who have never appeared in a 'Comedy' movie.
12. Show the top 3 most common roles assigned in the database.
13. Find the movie title that holds the highest budget record in each genre.
14. List all actors who have appeared in more than 5 different movies.

15. Show the movie title and the birth year of its oldest cast member.
16. Find all movies released after 2020 that feature 'Villain' roles.
17. Calculate the average budget of movies for every actor in the database.
18. Find movies that currently have no actors assigned to them.
19. Show the full names of actors who starred in movies rated higher than 9.0.
20. Count the number of unique actors who have worked in 'Horror' films.
21. List movies where at least one cast member was born after 2001.
22. Find the most common genre for Actor ID 50.
23. Show movie titles and actor names where the role was a 'Cameo'.
24. Calculate the total 'Star Power' (sum of ratings) for each actor.
25. Find the names of actors who have co-starred in a movie with Actor ID 1.

Section 4: Maintenance & Business Intelligence

1. Update the rating of Movie ID 1 to 9.5.
2. Increase the budget of all 'Action' movies by 10%.
3. Delete any movie from the database with a rating lower than 2.0.
4. Categorize movies as 'Hit' (rating > 7.0) or 'Flop' using CASE logic.
5. Categorize actors as 'Veteran' (born before 1980) or 'Newcomer'.
6. Count how many movies have a NULL or 0 budget.
7. Group movies into 'Low', 'Medium', or 'High' budget categories.
8. Find the 5 most recently added actors using the created_at timestamp.
9. Calculate the current age of every actor (based on the year 2026).
10. Find the average rating of movies grouped by their release year.
11. List genres where the average budget is greater than 50,000,000.
12. Remove all cast entries associated with Actor ID 500.
13. Find the total number of actors from each nationality, sorted by count.
14. Display movie titles alongside the character count of the title.
15. Find the movie with the second-highest rating using LIMIT and OFFSET.

16. Create a comma-separated list of all actors for each movie title.
17. Calculate the total budget for all movies released from 2021 onwards.
18. Update all instances of the genre 'Sci-Fi' to 'Science Fiction' in the table.
19. Find actors whose first name starts and ends with the same letter.
20. Calculate what percentage of the database consists of 'Horror' movies.
21. Find movies where the title contains at least three spaces (4+ words).
22. Create a report displaying movie titles as 'Film_Name' and release years as 'Debut_Year'.
23. Find the gap between the highest and lowest budget in the 'Drama' genre.
24. Select all actor records where the Actor ID is an odd number.
25. Provide a final count of all records in the Movies, Actors, and Cast tables.
